RATE OF ARRIVAL

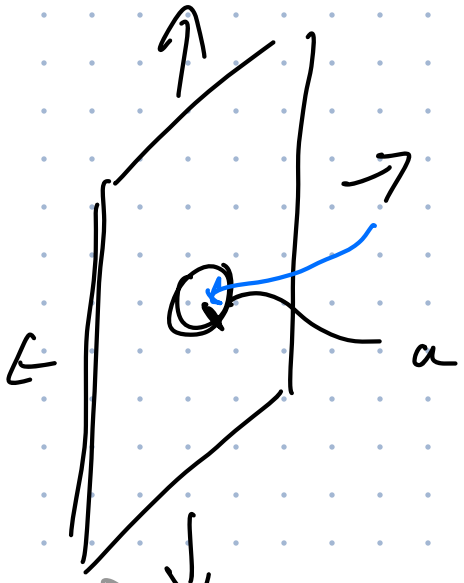

$$\lambda = -\iint J \, dA$$

$$= -4\pi R^2 \cdot J$$

ASSUMING PERFECT ABSORPTION OVER ENTIRE CELL SURFACE:

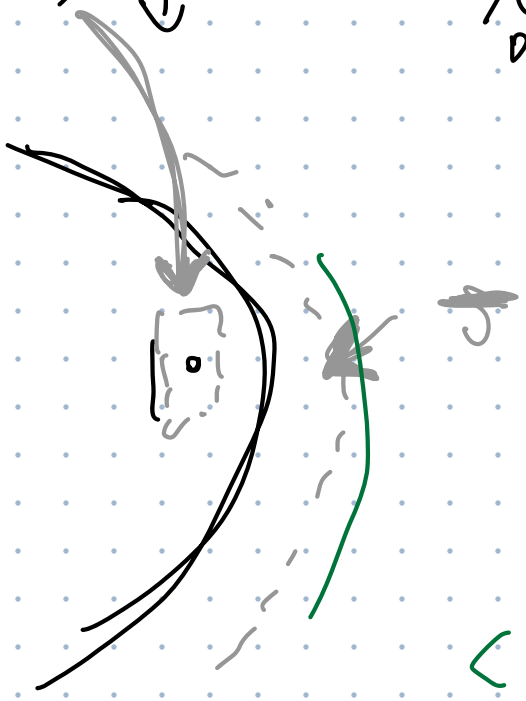

$$\lambda = 4\pi R D C_\infty$$

$$\lambda_{DISK} = 4D a c_I$$

$$\lambda_{N\,DISKS} = N \cdot 4D a c_I$$

$$\langle J \rangle = -\frac{\lambda_{N\,DISKS}}{4\pi R_I^2}$$
