PS 4

C_∞

$$\dot{n} = -\iint J \, dA$$

↑ RATE OF ARRIVAL

AVERAGE:

IF J = CONST

$$\dot{n} = -\iint J \, dA$$

$$= -J \underbrace{\iint dA}_{} = -JA$$

IF $J \neq$ CONST

$$\dot{n} = -\langle J \rangle \iint dA$$

$$\langle J \rangle = \frac{-\dot{n}}{\iint dA}$$

↑ AVERAGE

$$c(r) = A \ln r + B$$

$$= -\frac{A}{r} + B$$

$$c(r) \stackrel{?}{=} (c_I - c_\infty)\frac{R_I}{r} + c_\infty$$

$$c_I =$$
